

# Improve your Disinfection Program in **7 STEPS**

- 01** ALWAYS read the label and follow use instructions
- 02** Choose a disinfectant with fast contact times
- 03** Choose a disinfectant that kills the germs that you need it to kill.
- 04** Choose a disinfectant with a good safety profile that does not require the use of PPE
- 05** Practice good hand hygiene
- 06** Choose a supplier that will help you achieve your infection control goals and can ensure product availability.
- 07** Create a training program to educate staff on the proper use of products
